

Shark Attack PPT Instructions

1. When students choose a letter, **click on that letter** in the Powerpoint slideshow. If the letter is **not** in the final word, it will disappear. If the letter **is** in the final word, it will move to its correct location.
2. If a letter is in the final word **twice**, when you click the letter it will move to its correct location, but there will still be one left in the alphabet. This is your cue to **click the letter again**.
3. If a student chooses a letter not in the final word, **click the shark fin**. This will pop up another shark fin, moving the shark closer to the swimmer. Each time a student chooses a wrong letter, click the most recently popped up shark fin **closest to the swimmer**. This will pop up the next one. Clicking the final shark fin will trigger the “shark attack”.
